

Analysis of Benzoic acid

(Under the Condition of food additive analysis method in food,
Benzoic Acid and Sodium Benzoate)

Conditions

System : Chromaster HPLC system (HITACHI)
Column : InertSustain C18 (GL Sciences Inc.)
 (5 μ m, 250 x 4.6 mm I.D.)
Column Cat. No. : 5020-07346
Eluent : A) CH₃OH
 B) H₂O
 C) Buffer*
 A/B/C = 36/59/5, v/v/v
Flow Rate : 1.0 mL/min
Col. Temp. : 40 °C
Detection : UV 230 nm
Injection Vol. : 20 μ L
Sample : Standard

Analyte:

1. Benzoic acid 10 μ g/mL

* Phosphate buffer solution (0.2 mol/L, pH 4.0): Dissolve 27.0 g of potassium dihydrogen phosphate and 0.2 g of phosphoric acid with water to make 1000 mL.
